BEMO Cybersecurity Framework

Zero-Trust Approach for End-to-End Protection

- With the BEMO Gold Package, we configure your email, corporate and personal devices, and document and identity security using up-to-date best practices.

True security goes beyond just protection measures. Here's how BEMO's Gold Cybersecurity package fits within our comprehensive framework to secure your business.

Detect Attacks Before They Cause Damage

- We monitor and send you automatic notifications about risky sign-ons, device and email malware, spam, phishing and other threat attempts.
- Microsoft Defender for Endpoint automatically remediates potentially compromised assets
- In the rare case a breach does occur, with the Gold Security Package, you get up to 85% off your BEMO expert remediation cost!
- We proactively update your security configuration according to Microsoft changes and new employees to shore up any gaps in your defenses.
- View and assess your risk with Microsoft Secure Score

Frequently Asked Questions

Why do I need document security? It is becoming critical for businesses of every size to prevent sensitive data and customer information from leaving the organization. Document security can help SMBs not only in protecting their intellectual property but also in achieving regulatory compliance through reporting capabilities, data retention policies, and employee awareness.

Can I get my Microsoft licenses through Microsoft directly and still get a security package? All our customers are required to get their Microsoft licenses through BEMO. The licensing and the security package cannot be separate. This is how we are able to gain access to your tenant to enable all of the security features in our various BEMO packages, as well as provide break-fix support for your Office Suite.

What's the difference between Data Loss Prevention (DLP) and an Azure Information Protection (AIP)? Both AIP and DLP work together to provide comprehensive protection for your data across different locations and devices. AIP classifies and protects your data at the source, while DLP monitors and prevents your data from leaving your organization or reaching the wrong hands. AIP allows encryption and access control policies to your documents, so that only authorized users can open, edit, or share them. AIP allows you to classify and label your documents based on their sensitivity level. DLP detects and prevents your sensitive data from being accidentally or maliciously shared with people who should not have it. DLP uses predefined or custom rules to identify sensitive information types such as credit card numbers, health records, or social security numbers. DLP can also monitor and block actions that might expose your sensitive data, such as sending an email, uploading a file, or copying to a USB drive.

How does BEMO get access to our system if we choose the Gold package? We use GDAP (Granular Delegated Admin Privileges) to remotely access your system for maintenance and support purposes. GDAP is a secure platform that enables granular and delegated access instead of a Global Administrator role based on the specific needs and permissions granted to BEMO. To learn more, visit our blog post on [GDAP](#).

Monthly Price \$69 / user*
10 seats minimum purchase
