Last Updated: Feb 2025

Get ISO-27001 certified with ease, supported by ongoing monitoring and maintenance from BEMO's Expert Compliance Team.

Boost Your Competitive Advantage

Prove Commitment to Security

Improve Operational Efficiency

Increase Brand Reputation

ISO-27001 is the international standard that provides a framework for establishing, implementing, maintaining, and continually improving an Information Security Management System (ISMS). Its primary aim is to ensure the continuous confidentiality, integrity, and availability of information within an organization, by evaluating 7 requirements and the implementation of up to 146 controls, including the Risk Assessment, Risk Treatment, and Continual Improvement.

This certification is imperative for **businesses selling to customers outside of the US**. To assure clients and partners of unwavering dedication to global cybersecurity and privacy standards.

Confidentiality:
Safeguards data by controlling access privileges.

Integrity:
Ensures data's accuracy, trustworthiness, authenticity & reliability.

Availability:
Data must be accessible to authorized users to ensure business continuity.

BEMO Handles It All For You

Compliance Achievement:

- * ISMS Scope and Objectives
- * Roles and Responsibilities
- * ISMS Gap Assessment
 - * Documentation
 - * Awareness training

Risk Management Implementation

- * Risk classification, assessment and report as well as creation of a treatment plan
- * Control Implementation

Frequently Asked Questions

What's the difference between SOC 2 and ISO-27001?

There's about an 80% overlap between ISO-27001 and SOC 2 criteria, but SOC 2 is a US industry-specific attestation, while ISO-27001 is a broader, internationally recognized certification emphasizing a comprehensive information security management system (ISMS) for any organization. Also, because the ISO-27001 certification's timeframe of achievement and maintenance is more extensive than SOC 2, requiring more systems, policies and more robust and detailed documentation, the cost is greater.

Once we are certified, how can our company demonstrate proof to requestors?

BEMO Compliance customers are provided a public-facing compliance page that they can share with their customers, partners, etc. This portal displays the current status of your compliance framework and security control status in your environment, assuring that you are meeting the requirements. The report is an internal document (generated by a 3rd-party auditor) that describes the organization's systems and process in-depth. This report can be shared with customers via a secure portal or email under a non-disclosure agreement (NDA).

What is the validity period of an ISO-27001 certification?

ISO-27001 certifications are valid for three years. Recertification occurs every three years, with surveillance audits conducted after the first and second years to ensure ongoing compliance.

Migration costs are waived!
